IBMV MAHAVIDYALAYA | CUSTOMER PROPOSAL

IBMV Learning Platform

Public website · Student portal · Admin panel

A connected platform for visitors, learners, and IBMV staff

PROJECT QUOTATION

Target delivery: 24 weeks

Prepared for

IBMV Mahavidyalaya

Prepared by

Aparupa Gouranga Das

Proposal date: 19 October 2026

What this proposal covers

Detailed public website, student portal, and admin panel deliverables; shared integrations; testing and security checks; a defined 1,000+ concurrent virtual-user load-test objective; migration assistance; training; launch; and three months of bug-fix support.

Commercial and capacity assumptions are stated in the proposal. Hosting, messaging, payment-provider, and other third-party charges are excluded.

1. Executive summary

We propose to design and deliver a connected learning platform for IBMV with three user-facing portals: a public website for visitors, a student portal for learners, and an administrator panel for IBMV staff. Shared platform services will connect courses, enrollments, student progress, payments, memberships, exams, certificates, communications, and reporting.

The delivery will be demonstrated in stages on a private test environment. The project includes functional and integration testing, security checks, performance/load testing against an agreed target of at least 1,000 concurrent virtual users, data migration assistance, staff training, launch, and three months of post-launch bug-fix support.

The features described below are the agreed proposed scope. Where the reference platform showed a restricted, loading, legacy, or “Coming Soon” screen, the feature is stated as a proposed functional implementation only where it is included here; it is not represented as a verified copy of the reference system.

2. Deliverables at a glance

Deliverable	What it provides
Public website	Institutional information, searchable course catalogs, course details, publications, contact information, and clear enrollment/app links.
Student portal	Student dashboard, learning access and progress, community and announcements, calendar, exams, certificates, purchases, memberships, referrals, help, and settings.
Admin panel	Role-controlled tools for managing content, courses, learners, teaching operations, commerce, communications, reports, and platform settings.
Shared platform services	Authentication, role/permission checks, API/data layer, audit events, file/media access controls, notifications, payment integration, backups, and monitoring.
Testing and launch	Test plans and execution, security review, 1,000+ virtual-user load test, acceptance support, migration assistance, production deployment, and staff handover.

3. Public website deliverables

3.1 Shared site shell

- Responsive desktop and mobile header, navigation dropdowns, utility bar, and footer.
- Contact email/telephone links, donation link, social links, and learner-app download link.
- Sign-up and log-in entry points connected to the student authentication flow.
- Footer links for useful pages, terms, privacy, and social channels.
- Accessible navigation, page headings, keyboard focus, and image text alternatives.

3.2 Homepage

- Institution hero, short introduction, participation metric, and calls to action for exploring courses, downloading the app, and joining the community.
- Course-library sections for:
- ISKCON Board of Examination
- Vedvarsity / self-study courses
- Ancient Wisdom

- Kids & Parents
- Level Wise Shastric Study
- Live Classes
- Course cards with applicable title, image, summary, teacher, paid/free or price information, duration, language/ category/level, start date, course type, and enrollment action.
- Testimonials and video sections.

3.3 Course catalog pages

- Dedicated catalog pages for each course collection listed above.
- Search; category, teacher, language, and status filters as applicable to the collection.
- Upcoming, ongoing, and coming-soon groupings where applicable.
- Responsive course-card layouts, empty/loading/error states, and links to course details.
- “Coming Soon” content can be managed as a visible status rather than shown as a broken page.

3.4 Course detail pages

- Course summary, teacher/provider, fee/price, certificate/type indicator, and enrollment call to action.
- Configurable course facts: duration, session length/count, frequency, language, eligibility, and prerequisites.
- Schedule section with start date, date range, session times/timezone, regular class days, and detailed schedule link.
- Teacher information, course description, learning materials, audience, assessment plan, requirements, and expandable FAQs.
- External course resources and recommendation/application links where supplied and approved by IBMV.

3.5 Publications and institutional pages

- Books catalog grouped by language with format information and approved retailer links.
- Bulk-book enquiry form with first name, last name, address, pincode, city, book, quantity, email, country/phone code, and mobile number.
- E-magazine archive page and issue viewer/download interface. Exact archive fields will be finalized with IBMV because the reference feed was loading during inspection.
- Institutional overview, Srila Prabhupada information, advisory board, organization team, and contact/location pages.
- Contact page with postal address, email, telephone, and map/location area.

4. Student portal deliverables

4.1 Shared student shell

- Secure sign-in/session handling and student-specific navigation.
- Responsive header with Home, Courses, Contact Us, Subscription, Communities, Search, Profile, and sign-out entry points.
- Student ownership checks for private profile, enrollment, progress, purchase, referral, certificate, and communication records.

4.2 Student pages and menu functions

Student menu	Included functionality
Home	Featured-course carousel, today's classes, continue-learning cards, progress, lesson counts, and resume/open action.
My Learning	Active/completed learning views, stream selection, enrolled course cards, learning dates, progress, and course resume link.

Student menu	Included functionality
Communities	Community list and authorized community spaces, latest posts, and agreed discussion interactions. User-generated content is private to authorized members.
Announcements	Searchable announcement feed, unread filter, priority/date information, and announcement detail view.
Calendar	Day/week/month views, date navigation, Today control, scheduled classes, and timezone-aware display.
Exams	Upcoming and past exam views, eligibility/status, and agreed examination attempts and result access. Exam rules are finalized during planning.
Certificates	Earned certificate cards with issue/expiry information and download/share actions.
Memberships	Current membership status, plan/benefit information, and expiry/renewal information where applicable.
My Purchases	Purchase history cards with item, date, amount/free status, payment status, and purchase detail link.
Refer & Earn	Student's referral code, copy/share controls, rewards/credits summary, terms, and transaction history according to approved program rules.
Help	Support message form, contact options, and submission feedback.
Settings	Profile view/edit and preferences for timezone, session reminders, promotional notifications, and available communication channels.
Sign Out	Ends the authenticated session.

4.3 Learning and access rules

- Enrolled students see only courses and materials authorized for their enrollment or active membership.
- Course learning view supports agreed video/PDF lesson types, lesson navigation, progress, resume position, and live-class links.
- Lesson completion and assessment status are stored server-side; opening a lesson alone does not mark it complete.
- Paid media/files use protected access rules and expiring/signed access where supported by the selected hosting provider.
- Student-facing errors, empty states, and loading states are explicit.

5. Admin panel deliverables

5.1 Admin shell and common capabilities

- Role-based staff accounts, navigation, permissions, and session management.
- Dashboard, global search entry point, quick-create menu, notification entry point, profile menu, and logout.
- Reusable list patterns: search, filters, tabs/status, column selection, pagination, export, empty/loading/error states, and row actions.
- Create/edit/view/archive flows for agreed entities, with field validation, confirmation for consequential actions, and success/error feedback.
- Audit history for significant staff changes.

5.2 Admin navigation and included functions

Admin menu	Included screens and operations
Home	Performance cards and reports, active-user/enrollment summaries, sales chart, today's sessions, attendance/sign-in summary, session schedule/ calendar, and holiday management.
Products → Events	Event list, visibility/status filters, create/edit/archive, event dates, and event actions.
Products → Mentorships	Mentorship catalog and administration, subject to final agreed fields and workflow.
Products → eBooks	eBook catalog/content records and publication state where required by IBMV.
Products → Test Series	Test-series catalog and associated assessment links.
Products → Playlists	Curated course/lesson playlist management.
Learning → Batches	Create/manage batches; filter by status/course/module/instructor; Active, Completed, Archived, All; batch/course/duration/instructor/manager/ progress fields.
Learning → Sessions	Calendar and list/day/week/month views, session scheduling, class details, attendance/sign-in, and session actions.
Learning → Announcements	Create/manage announcements; date/tag filters; name search; urgency, tags, publication timing, and actions.
Learning → Feedback Forms	Create/manage feedback forms; form name, created date, type, conversions, and action fields.
Learning → Module Library	Search, add, and manage reusable modules; module name, content, and actions.
Learning → Question Bank	Create/manage question banks and questions; ID, name, difficulty, exam, subject, topic, and actions.
Learning → Asset Library	Search/filter/upload media assets; type, usage, storage summaries, uploader/date/size/downloads, and actions.
Learning → Assessments	Assignment-based and custom-link assessment lists; courses, pricing, attempts/registrations, and add/edit actions.
Learning → Submissions	Search/filter submissions; Not Evaluated/Evaluated/All; learner, assessment, evaluation status, date, timeliness, type, marks, percentage, product, batch, and review action.
Learning → Session Recordings	Search/filter recordings by date/batch; active/completed/archived batch views; class, batch, instructor, status, and actions.
Learning → Certificates	Create/manage certificate templates/issuance rules and view issued certificate records.
Users → Learners	Add/view/manage learners; filters; All/Registered/Enrolled/Completed/On Leave/Archived; learner, contact, date added, status, registration number, configurable columns, and export.
Users → Team	Add/manage staff; Active/Archived users; name, role, contact, date added, branch, actions, and export.

Admin menu	Included screens and operations
Users → Segments	Create/search learner segments; segment name, type, learner count, created date, and actions.
Users → New Enrolment	Single enrollment, bulk enrollment, learner registration, and advanced bulk enrollment workflows.
Engage → Community	Community management, members, messages, pins, and agreed moderation tools.
Engage → Discussions	Discussion areas linked to approved courses/batches and moderated by authorized staff.
Marketing → Campaigns	Campaign list/create/schedule; channel/status/date filters; type, channel, schedule, created date, send status/count, and actions.
Marketing → Workflows	Configurable communication/automation workflows, subject to role permissions and agreed triggers.
Marketing → Blogs	Create/manage blog content; status, views, created date, visibility filters, and actions.
Marketing → Banners	Add/edit banners; thumbnail, name, status, and publication controls.
Marketing → Leads	Lead/enquiry directory, status tracking, and follow-up workflow as approved.
Marketing → Promotional Templates	Manage reusable promotion/message templates.
Marketing → Promo Codes	Create/manage discount codes, validity, eligibility, and usage limits.
Marketing → Testimonials	Manage testimonials and public-site publication status.
Sales → Abandoned Cart	Abandoned/completed views, date/course filters, summary totals, learner/contact, items, cart value, abandoned date, actions, and export.
Sales → Cheque Management	Record/review cheque payment status and reconciliation fields finalized during planning.
Analytics	Reports for sales/enrollment, batch/progress, feedback/ratings, marketing, trainers, notification logs, community, and advanced reporting; agreed exports and filters.
Settings → Profile & Organization	Admin profile, organization/sub-organization configuration, and profile/password actions.
Settings → System Notifications	Configure system notification settings.
Settings → Setup & Customization	Categories, custom fields, grading system, miscellaneous fees, international selling, and learner experience options.
Settings → Manage Billing	Utility wallet/balance view and agreed billing information.

Field definitions and acceptance: Table fields above follow the visible reference labels where observed. Final column sets, custom fields, filters, roles, and actions are confirmed during Stage 0. Access-restricted or Coming-Soon reference pages do not define existing behavior; implementation will follow the agreed requirements and permissions.

6. Shared services and integrations

- Common API and data model for students, staff, courses, lessons, batches, enrollments, progress, products, orders, memberships, exams, certificates, and communications.
- Razorpay payment integration for agreed purchase types, server-side payment verification, webhook handling, receipts, duplicate-payment protection, and refund tracking.
- Email, WhatsApp Business, SMS, and browser/push notification integration using customer-owned provider accounts and approved templates.
- Video/file hosting integration selected with IBMV; paid content access rules.
- Role-based authorization and admin audit events.
- Automated backup configuration, restore procedure, application monitoring, error logging, and launch handover.

Third-party account approval, transaction fees, subscription costs, hosting, video storage/egress, domain, and messaging charges are excluded from the project fee.

7. Testing, security, and 1,000+ concurrent-user load target

7.1 Testing included

- Requirements traceability and stage-level acceptance checks.
- Unit/component tests for critical business logic and reusable UI.
- End-to-end functional tests for registration, login, enrollment, course access/progress, payment confirmation, exam submission, certificate access, and admin workflows.
- Integration tests for Razorpay webhooks and configured messaging/media integrations, using test/sandbox accounts where offered.
- Regression checks on supported desktop/mobile browsers and responsive layouts.
- Accessibility checks for critical navigation, forms, keyboard access, headings, and feedback states.
- Security checks covering authentication, role/ownership enforcement, input validation, common web risks, secret handling, and payment verification.
- Backup/restore and production-readiness checks.
- IBMV staff acceptance testing and issue resolution for in-scope defects.

7.2 Load-test objective and method

The included load test targets at least 1,000 concurrent virtual users performing a representative mix of public catalog browsing, student authentication/session use, course/dashboard reads, and admin list/report reads. Test scripts, ramp profile, data volume, and endpoint mix will be agreed before the test. The test will include a controlled ramp-up, a sustained run, and a short peak/spike run. Test accounts and synthetic/non-production data will be used.

Proposed acceptance targets for the agreed production-like application environment:

- Sustain 1,000 simulated concurrent user sessions for at least 30 minutes after ramp-up.
- Standard application read/API operations: p95 response time at or below 800 ms, excluding third-party services and long-running reports.
- Core browser page load for agreed pages: p95 at or below 2.5 seconds on the agreed test network/device profile, excluding external media playback and third-party widgets.
- Application error rate below 1% for valid scripted transactions, excluding deliberately invalid inputs and failures demonstrably caused by external providers.
- No unresolved critical/high-severity performance defects or data-integrity errors in the tested scenarios.

The report will include environment and data assumptions, virtual-user profile, throughput, latency percentiles, error rate, resource observations, findings, and recommendations. A remediation/retest cycle for in-scope performance defects is included.

Important capacity qualification: This is a tested engineering target, not an unconditional guarantee of capacity in an unspecified hosting environment. The target depends on production-equivalent server/database sizing, caching, network, CDN/video provider, and any customer-managed integrations. The test covers application/API transactions, not 1,000 simultaneous high-bitrate video streams; video delivery must be capacity-supported by the chosen specialist provider. Hosting/server scale-up costs and provider charges are not included. The acceptance environment and pass/fail rules must be signed off in Stage 0.

8. Delivery plan and estimated schedule

Target delivery is approximately 24 calendar weeks, with a planning allowance of up to 28 weeks for feedback, data readiness, and third-party approvals. Workstreams overlap; stage estimates below are not additive calendar durations.

Stage	Main deliverable	Indicative weeks
0. Planning and design	Approved designs for all portals, workflows, data/ permissions, membership/ access rules, and load-test plan	2.5
1. Foundation	Environments, authentication, roles, shared data/API foundations	2.5
2. Public website	Public pages, catalogs, course detail, publication/ contact pages, and content administration	4.5
3. Courses and learning	Student portal, courses/ lessons, batches/sessions, progress, and learning access	5
4. Payments	Razorpay sandbox/live integration, orders, receipts, coupons, and refund tracking	3.5
5. Exams and certificates	Assessment flows, results, certificate generation/ verification	3.5
6. Memberships and referrals	Plans, entitlements, renewals, referral rewards and records	3.5
7. Communication	Announcements, community/discussion scope, calendar, help desk, reminders	5
8. Admin and polish	Admin modules/reports, exports, SEO, language/ accessibility and final UI polish	2.5
9. Migration and launch	Agreed data migration, security/load tests, staff training, deployment, handover	3.5

Each stage includes a working demo and an agreed feedback/acceptance round. Delays in data, content, decisions, access to partner accounts, or provider approval can shift the launch date.

9. Fixed project quotation: ₹5,00,000

Work package	Amount
Public website and catalog experience	₹53,000
Student portal and learner workflows	₹2,03,000
Admin panel and staff operations	₹2,44,000
Shared backend, APIs, authentication, integrations, and platform services (included at no additional charge)	₹0 (included)
Quality assurance, security checks, performance engineering, and 1,000+ user load-test execution/ report (included at no additional charge)	₹0 (included)
Migration assistance, deployment, staff training, and three-month bug-fix support (included at no additional charge)	₹0 (included)
Total project quotation	₹5,00,000

This is a fixed-scope estimate based on the deliverables in this proposal. Work outside the agreed scope will be estimated and approved in writing before it begins.

Payment schedule

Milestone	Share	Amount
Project start	30%	₹1,50,000
Acceptance after Stage 3: Courses and Learning	30%	₹1,50,000
Acceptance after Stage 7: Communication	30%	₹1,50,000
Go-live	10%	₹50,000

Tax: The earlier proposal draft stated “No GST is charged.” Tax treatment must be confirmed against the supplier's registration and applicable law and will be stated on the final invoice.

10. Included and excluded

Included

- Three portals and shared services described in this proposal.
- Razorpay integration and configured messaging/media-provider connections.
- Functional, integration, regression, security, and load testing described above.
- Migration assistance for customer-provided, agreed-format data.
- Staff training and deployment handover.

- Three months of post-launch bug-fix support for defects in delivered, accepted scope.

Excluded or separately chargeable

- Hosting, cloud/server/database capacity, CDN, domain, email subscription, video hosting/storage/egress, WhatsApp/SMS/push fees, and payment transaction fees.
- Native Android/iOS applications. A responsive website/PWA experience is included; app-store publication is separate unless explicitly agreed.
- Data cleanup, reconstruction, or migration from unsupported/undocumented systems beyond the agreed import format and mapping.
- New features, major scope changes, third-party subscriptions, or partner implementation fees.
- Ongoing support/maintenance after the included three-month bug-fix period.
- Live video infrastructure/provider guarantees or a load test of actual video-stream delivery.

11. IBMV inputs and decisions required

1. Named project decision-maker and feedback within two working days. 2. Final branding, approved content, course details, teacher bios, book data, policies, and legal notices. 3. Course/membership access, expiry, renewal, refund, coupon, referral, exam, grading, certificate, and student communication rules. 4. Data exports for students, courses, enrollments, and progress, plus a decision on account migration/reset and student communication. 5. Customer-owned Razorpay, email, WhatsApp Business, SMS, video/media, and hosting accounts and required approvals. 6. Hosting environment and scale budget capable of supporting the agreed load profile; production-equivalent environment for acceptance load test. 7. Confirmation of supported languages, invoice/tax format, accessibility requirements, and donation scope. 8. Staff to participate in training and user acceptance testing.

12. Acceptance, warranty, and change control

- Stage acceptance is based on the approved stage deliverables and test cases.
- IBMV reports reproducible in-scope defects during acceptance; the delivery team resolves them before stage sign-off or documents an agreed exception.
- Final sign-off follows production-readiness checks, agreed load-test criteria, migration rehearsal/approval, staff acceptance, and launch checklist.
- Three months of bug-fix support starts from go-live and covers defects in delivered scope. It does not include new features, provider outages, hosting upgrades, or changes made by third parties.
- Scope, acceptance targets, schedule, and commercial changes require written approval from both parties.

13. Approval
